GENERAL GUIDELINES FOR TAP INSTALLATION AND CARE INSTRUCTIONS

Before commencing to install the taps & shower please read all of the following instructions carefully failure to observe these guidelines could invalidate the warranty on the product.

It is important for optimum performance of the tap that the hot and cold water supplies are balanced.

Local water authority regulations require that isolating valves are fitted in the pipe work beneath the tap to allow the tap to be individually isolated. This makes servicing or replacement of the tap much easier.

Any warranty claim on the tap will be handled on the basis that isolating valves have been fitted

Bath panels MUST be installed so that they can be removed to allow servicing /replacement of the tap and must NOT be tiled in. The panel must be installed AFTER all tiling has been completed.

Basin wastes should be installed with a bead of silicone to ensure a watertight seal and the rubber washer fitted before the nut. Do NOT over tighten the nut this could damage the basin and invalidate the warranty.

Mono Basin Mixer

Stur

Tail Pipes

1 A spanner may be required. This can be purchased in store.

3 After disconnecting the water supply, drain the pipework.

4 Unscrew the nuts connecting the water pipes to the fittings

2 Ensure mains water supply is turned off at the stopcock or service valves.

REMOVING OLD TAPS OR MIXER

6 Unscrew backnuts and remove taps.

these simple step-by-step instructions.

Please note Tail pipes are supplied as

copper tubes or flexible tails. Studs

and nuts may vary in number and

position depending on range.

1 Identify all components.

FITTING YOUR NEW MIXER

5 Save and inspect fibre washer for future use.

Fitting your new mixer is easy when you follow

"O" Ring

2 Prior to installation flush out pipework to remove debris

Check valves should be fitted where necessary.

The use of any abrasive material will invalidate the guarantee.

AFTERCARE INSTRUCTIONS

3 Assemble unit with pop up rod (where applicable), fit rubber "O" ring to

4 Screw stud into base of mixer and slide horseshoe washer and plate over it.

This product should be fitted in accordance with Water ByLaw Regulations

Whilst modern plating techniques are used in the manufacture of this item, the surfaces

will wear if cleaned incorrectly. Clean this product with a soft cloth and clean water.

Secure with supplied nut. Do not overtighten as it could damage the bath.

base of mixer and place the fittings through hole in the bath

5 Connect the two tail pipes to the hot and cold water supplies.

Basin wastes may be supplied with rubber washer(s) and it is recommended that where washer(s) are supplied a small bead of silicone is also applied to both sides of the bath before the nut is fitted and tightened. Do NOT over tighten the nut as this could damage the bath and invalidate the warranty.

Where flexi tails are supplied it is essential that they are NOT over tightened.

Once the tap has been installed the water supply should be turned on and the whole installation thoroughly checked for leaks. It is ESSENTIAL that the system is thoroughly flushed to remove any debris or foreign matter which could become lodged under the valve seat and cause dripping or premature failure.

It is important that tile grout or any aggressive cleaners do not come into contact with the tap and cleaning should be with warm soapy water and the tap thoroughly dried after cleaning.

Mono Basin/Bidet Mixer

Ensure mains water supply is turned off at the stopcock or service valves.

1 A spanner may be required. This can be purchased in store.

After disconnecting the water supply, drain the pipework.

4. Unscrew the nuts connecting the water pipes to the fittings.

Wall Mounted **Bath Shower Mixer**

Fitting your new mixer is easy when you follow these simple step-by-step

1 Identify all components

- 2 IMPORTANT! Rinse out pipework prior to fitting.
- 3 After having rinsed the pipework, install the valve as a standard exposed fitting, with the hose outlet facing downwards.
- 4 When connecting the water supply to the valve, it is recommended that the hot supply is to the left and the cold supply to the right with the hose outlet from the botton.
- 5 Connect the eccentric threaded wall unions to the supply pipes.
- 6 Ensure that the wall coverings are fitted to the mixer prior to the connection to the water supply
- 7 Set the eccentric unions so they correspond with the valves inlets.
- 8 Fit the mixer to the unions, ensuring to fit the sealing washer, tighten with a spanner until watertight
- 9 Turn on the water supply and check for leaks.

This product should be fitted in accordance with Water ByLaw Regulations Check valves should be fitted where necessary.

AFTERCARE INSTRUCTIONS

Whilst modern plating techniques are used in the manufacture of this item, the surfaces will wear if cleaned incorrectly. Clean this product with a soft cloth and clean water. The use of any abrasive material will invalidate the guarantee
